

Ultrasim® 3D Sustainability Analysis (LCA) - BETA

Offering

Ultrasim® 3D Sustainability Analysis (LCA) - BETA

We create chemistry

	Starter	Premium	Enterprise
	Material LCA	Part LCA Service (CO2)	Become a Partner
What you get:			
LCA material onepager	\checkmark	\checkmark	\checkmark
CO2 footprint report of 3D printed part		\checkmark	\checkmark
Add your printer			\checkmark
Implement LCA data to your software			\checkmark
What 3D printing materials: Ultrasint® Powder 	 Ultrasint® TPU 01 and 88A Ultrasint® PP 1400 Ultrasint® PA11 and PA11 Black 	 Ultrasint® TPU 01 Ultrasint® TPU 88A (coming soon) Ultrasint® PP 1400 (coming soon) Ultrasint® PA11 and PA11 Black (coming soon) 	BASF Forward AM Materials
Ultrafuse® Filaments	 Ultrafuse® PLA – under review (3Q 23) Ultrafuse® ABS – under review (3Q 23) Ultrafuse® PET – under review (3Q 23) Ultrafuse® rPET – under review (3Q 23) 	 Ultrafuse® PLA – under review (3Q 23) Ultrafuse® ABS – under review (3Q 23) Ultrafuse® PET – under review (3Q 23) Ultrafuse® rPET – under review (3Q 23) 	BASE Forward AM Materials
What 3D printing machines: Ultrasint® Powder 		 HP JF 52XX SLS printers (coming soon) 	Your printer
Ultrafuse® Filaments		Ultimaker S5FFF printers (extension possible)	
Get your Add-on:		 Extended LCA with all 16 impact categories Ultrasim® 3D Cost Analysis (TCO) Comparison to conventional manufacturing Carbon Footprint compensation 	
What we need from you:		STL-file of your partInput report (production setup)	1 hour of your time to understand your problem and derive a solution concept
Price:	Free of Charge	Starting at 3.500 €	On request
Lead time:	14 days	On request	On request

Environmental data in 16 impact categories [according to EF 3.0]

Premium – Workflow: Part LCA Service (CO₂)

1. Schedule a 30min call 2. We calculate the CO2 footprint of your part **3. LCA report and presentation** Set up the production setting (e.g. location, We perform the LCA to assess We present you the LCA report and explain transportation) of your 3D printed application. the carbon footprint of your part process hotspots Executive summary of results – Premium solution Scope of analysi XXX kg CO2 Eq CO2 • (i) Part carbo XX % 'co, ŝ

D - BASE

We create chemistry

Premium – Example: Summary of Conditions

Functional unit :

We assume the functional unit to be **one complete build job** of this **BASF mount** printed on a **HP MJF 52XX** 3D printer. Every part printed with acceptable quality is the desired outcome.

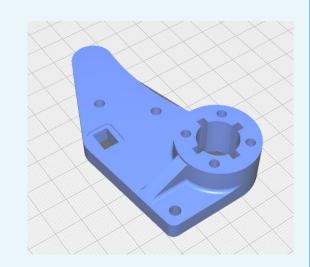

Goal of the study :

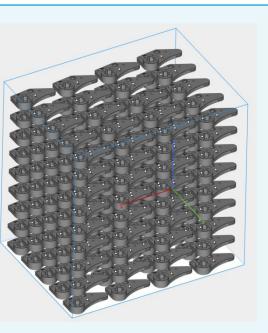

Measuring the impact of part fabrication in MJF specifically on the HP MJF 52XX using a Ultrasint powders including all impact categories

Scope of the study : Cradle to Gate

Methodology used: EF 3.0

Cutoff criteria: 95% of all impacts

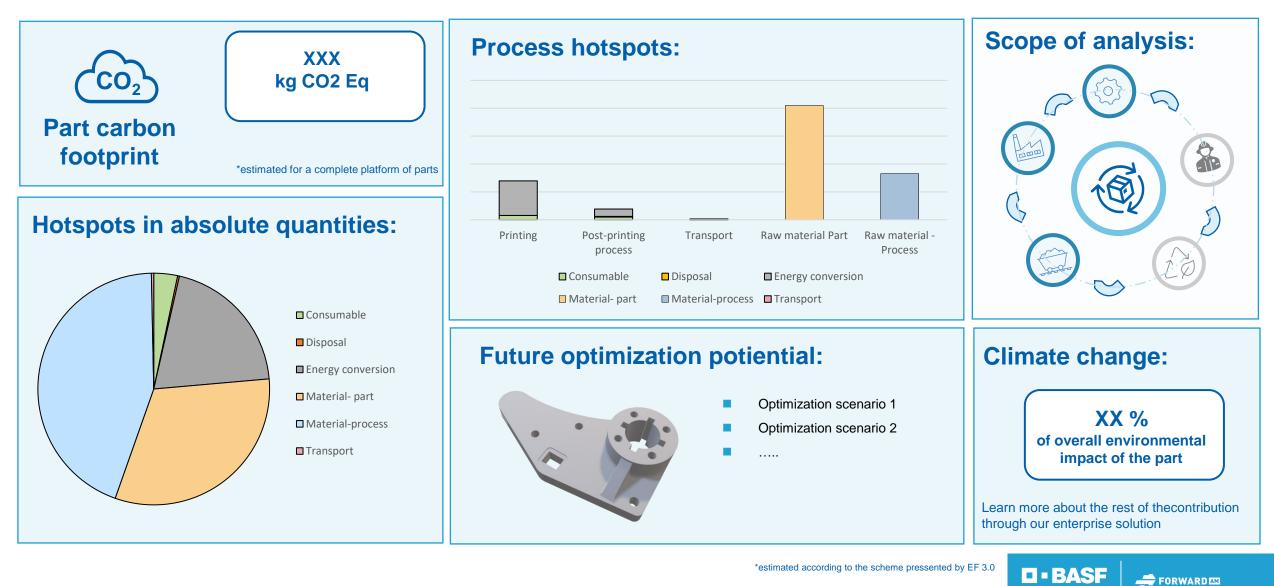

- Total parts per build job: 180 parts
- Gap between parts: 5 mm
- Layer thickness = XX μm
- Total occupation for 1 part = 1/180
- Machine : HP MJF 52XX
- Build volume : 380 x 284 x 380 mm
- Part scrap rate : XX %
- Supports : 0 %
- Quantity : min : 180 parts
- Finish : Raw (Sandbasted part)

Assumptions:

- Study not critically reviewed [But materials currently in progress]
- Part packaging and transport of printed part neglected
- Assembly, use phase and end of life treatment of printed part neglected
- Production in Europe Electricity grid mix for Europe used
- Part scrap rates and build scene not validated in production environment

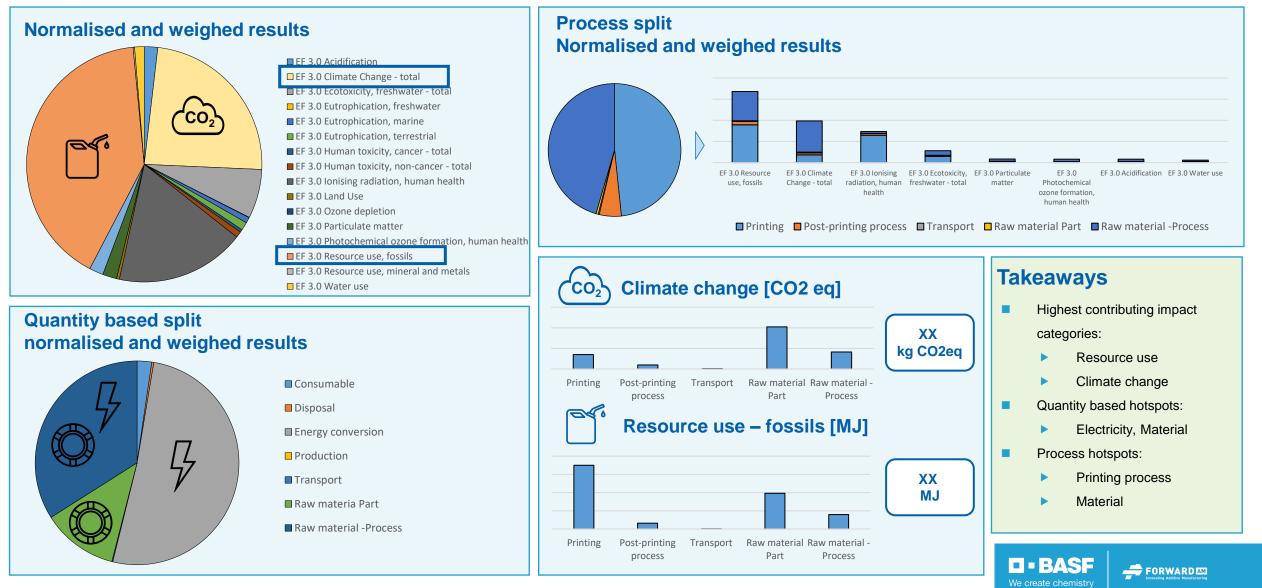

Premium – Example: CO2 Footprint Report of 3D Printed Part

We create chemistry

Premium – Example: Environmental Report of 3D Printed Part

Enterprise – Workflow: Become a Partner

1. Kick-Off Meeting

2. LCA data preparation

3. More transparency of your solution

We start with a 1-hour kick-off meeting understand your problem and derive a solution concept. This may include integration of a printer or LCA data into your software platform.

We prepare the integration of your printer or software

We present you the LCA report of your machine or environmental footprint feature in your software
